# **Custom macros**

Ian Mitchell

2025-04-28

#### 1. Bras and kets

Originally, I was using the braket package for this, but it was honestly easy to just write some macros for this.

$$\texttt{\pra}\{\texttt{\pri}\} \rightarrow \langle \psi |; \texttt{\phi}\} \rightarrow |\phi\rangle$$

## 2. Expectation value

 $\alpha$  \$\expval{a}\$  $\rightarrow \langle a \rangle$  \$\$\expval{\diff{f}{t}}\$\$

$$\rightarrow \left\langle \frac{df}{dt} \right\rangle$$

#### 3. Commutation

### 3.1. Commutator

$$\operatorname{(op}\{x\}\}\{\operatorname{(op}\{p\}\} = \operatorname{(ihbar} + \left[\hat{x},\hat{p}\right] = i\hbar$$

# 3.2. Anticommutator

 $\frac{\sigma_{c}{i}}{\ln_{c}{j}} = \det_{\alpha, \beta}$ 

$$\rightarrow \left\{ \hat{c}_{i},\hat{c}_{j}^{\dagger }\right\} =\delta _{\alpha ,\beta }$$

# 4. Compact derivatives

\$\$\dlp{f}{t}\$\$

$$\to \partial_t \, f$$
